         Code 

[]:

[]:

```
[5]: # Find the index of the store with the lowest sales
import numpy as np
store_sales = np.array([25000, 32000, 40000, 28000])
worst_store_index = np.argmin(store_sales)
print(f"The worst performing store is at index: {worst_store_index}")
```

The worst performing store is at index: 0
