 +        Code 

```
[2]: students = [
      ("Abhi", 101, (85, 90, 78), "A"),
      ("Bhavya", 102, (72, 68, 80), "B"),
    ]
    def display_all_students(students):
        print("\n--- Student Records ---")
        for student in students:
            name, roll, marks, grade = student
            print(f>Name: {name}, Roll No: {roll}, Marks: {marks},
        print("-----\n")
    def remove_student(students, roll_number):
        for i, student in enumerate(students):
            if student[1] == roll_number:
                del students[i]
                return True
            return False
    if __name__ == "__main__":
        roll_to_remove = 102
        if remove_student(students, roll_to_remove):
            print(f"Student with roll number {roll_to_remove} removed.")
        else:
            print(f"No student found with roll number {roll_to_remove}")
        display_all_students(students)
```

Student with roll number 102 removed.

--- Student Records ---

Name: Abhi, Roll No: 101, Marks: (85, 90, 78), Grade: A
