

File Edit View Run Kernel Settings Help

         Code 

```
•[4]: # Convert the feedback to lowercase and count occurrences of '
def count_good(feedback):
    count = feedback.lower().split().count('good')
    return count

feedback = input("Enter your feedback: ")

# Count occurrences of "good"
good_count = count_good(feedback)
print(f"The word 'good' appears {good_count}
      times in the feedback.")
```

Enter your feedback: This is a good feedback and the service  
The word 'good' appears 2 times in the feedback.
