Code

```python
my_dict = {
    "name": "Adhi",
    "age": 28,
    "city": "Banglore",
    "job": "Engineer"
}
try:
    key = input("Enter a key to look up (e.g., name, age, city
    value = my_dict[key]
    print(f"The value for key '{key}' is: {value}")
except KeyError:
    print(f"Error: The key '{key}' was not found in the dictic
```

```
Enter a key to look up (e.g., name, age, city, job):  name
The value for key 'name' is: Adhi
```
